SHELL MOBILITY

Transitioning from AutoCAD to Autodesk Revit

ADDED VALUE OF OUR TEAM

Faster design cycle time Auto generated BOQ Better quality checkings

Artelia invests in people upskilling and in the latest technology tools.

The engineering industry is an ever-changing environment with technological advances influencing the way we do business. With this, it is really important to upskill our work force and upgrade our tools from time to time.

In the past few months, our teams have undergone a series of Revit trainings to prepare for full use of Revit in the preparation of designs and drawings in Quarter 2. This shift will make a faster design cycle time, auto generated Bill of Quanty (BOQ), and better quality checking through clash detections using BIM360.

As businesses look towards a post-pandemic future, anchoring on learning and upskilling makes our company stay in the loop in this very competitive engineering industry. This helps our business excel now and in the future.
