

# SHELL MOBILITY

The move to a more sustainable and greener construction materials

Photos taken at supplier's manufacturing plant

Artelia is strongly committed to sustainable development.

## ADDED VALUE OF OUR TEAM

Reduction of environmental footprint

Use of eco-friendly construction materials

As Shell's local partner, we help the client to reduce the environmental footprint of its projects, while also ensuring that a sustainable approach is adopted for its own activities. In support to this commitment, our local Procurement Team has expanded its horizon on choosing the construction materials and furniture used in our Shell Mobility sites.

Recently, our local teams visited GreenAntz and Astron Metal Works Corporation to discuss and checkout possible procurement of eco-friendly products like furniture made from recycled plastic waste. Materials like modular walls and roofs made out of sandwich panels and other fabricated structural steel components were also looked into.

The aim is to maximize sources for future projects and innovate materials to fulfill other construction requirements.
